Wednesday

Information & Preparedness

- Heaviest rainfall is expected this afternoon through tonight.
- Flash flood risk is most likely in areas that see prolonged moderate to heavy rain, urban areas, and those that received copious rainfall last week.
- Flash flooding may occur after sunset. Turn around, don't drown!

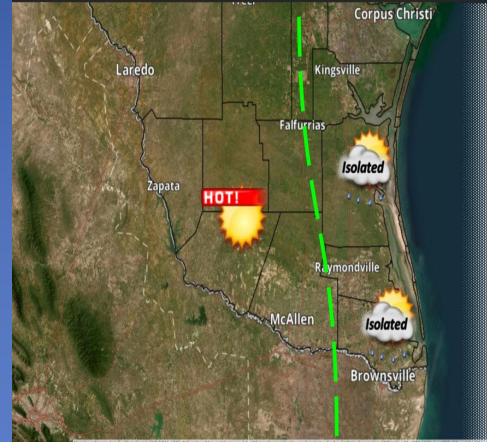

National Weather Service | Amarillo

Follow Us: @NWSAmarillo

As tropical moisture continues to stream into the region, several rounds of rain, some very heavy at times, will bring at least a 40% chance for flash flooding to a large portion of the western and central combined Panhandles. The heaviest rainfall rates will most likely occur this afternoon through tonight.

Today's Forecast Outlook

Hot afternoon, low rain chances

Continue to practice heat safety!

What to Expect:

- High Temperatures: 95-104°F
- Heat Index Values: 105-110°F

- 20% chance of showers or storms along the sea breeze

- Southeasterly winds around 10-15 MPH with gusts up to 20-25 MPH

NATIONAL WEATHER SERVICE BROWNSVILLE/RGV

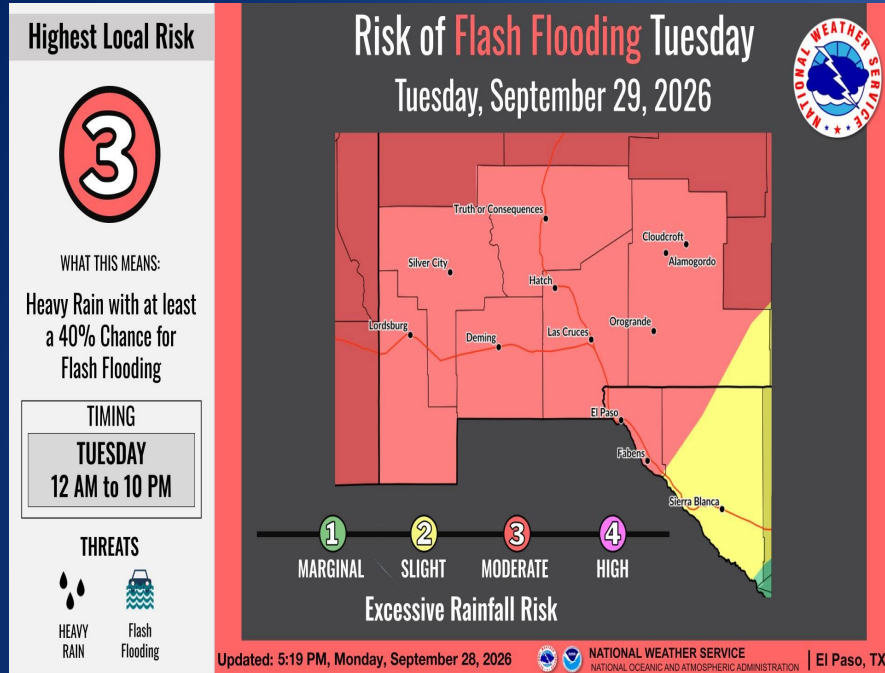

Follow: @NWSBrownsville

weather.gov/bro

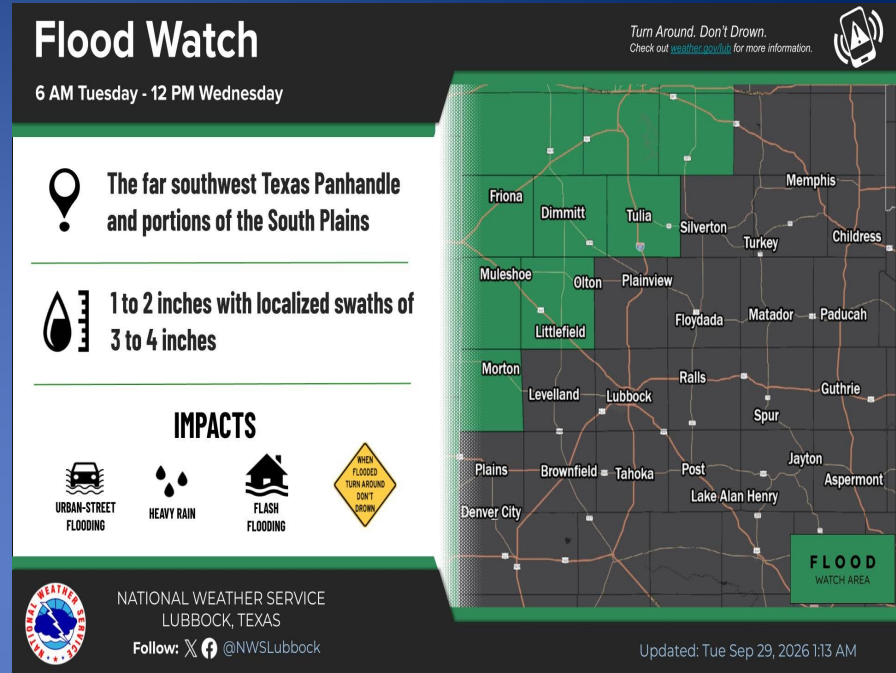

Updated: Tue Sep 29, 2026 1:50 AM

Another hot afternoon is in store today across Deep South Texas with widespread heat indices in the triple digits. Isolated showers and thunderstorms may develop along the sea breeze late this morning and afternoon. If spending time outdoors, be sure to stay hydrated and take steps to avoid heat illness.

Hazardous Weather

Moderate Risk of flash flooding Tuesday

A Flood Watch remains in effect for portions of the South Plains and the far southwestern Texas Panhandle, beginning Tuesday morning and continuing through midday on Wednesday. Total rainfall amounts of 1 to 2 inches are expected, with localized swaths of 3 to 4 inches possible. These areas already received several inches of rain over the last week. Flooding is possible. We will continue to monitor and update as necessary.

Hazardous Weather

Flood Watch

Monday Night Through Early Wednesday Morning

Southeast New Mexico, Far West Texas, and Guadalupe Mountains

Rainfall amounts of 1 to 2 inches, with very isolated amounts between 3-4 inches possible in the heaviest showers and storms.

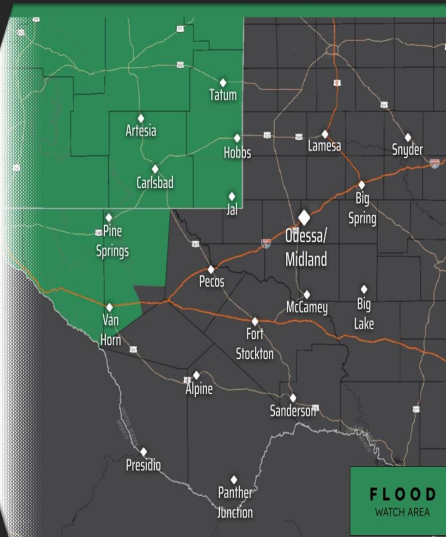

IMPACTS: URBAN-STREET FLOODING, HEAVY RAIN, FLASH FLOODING

What to Do: Prepare for heavy rain that could produce flooding and flash flooding. Drive carefully as wet roads could lead to hydroplaning.

Updated: Sun Sep 27, 2026 1:42 PM

Flood Watch

All of West-Central Texas.

Early Wednesday morning through Friday morning

Multiple rounds of showers and thunderstorms will be capable of producing widespread 2-4" of rainfall. Localized amounts of 7"+ are also possible.

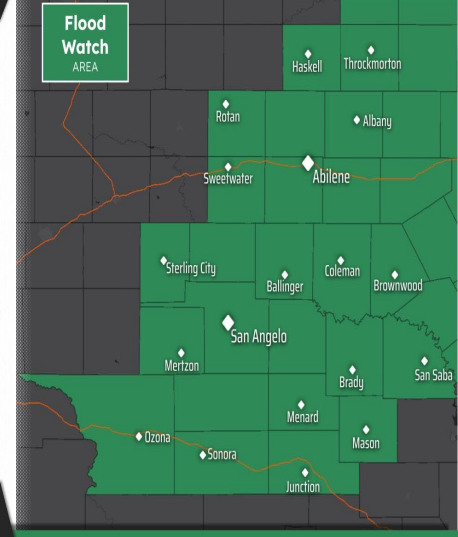

Never drive onto roadways covered in water

Never attempt to walk, swim, or drive through flowing flood waters

National Weather Service · San Angelo
weather.gov/SJT

September 29, 2026
2:11 AM

Tropical moisture will overspread the region during the early to middle part of the week, promoting very heavy rainfall for portions of the area. Soils remain saturated across SE New Mexico and in Culberson County from last week's rains/flash flooding. As a result, a Flood Watch has been issued for these locations from Monday evening through early Wednesday morning.

A Flood Watch is in effect from early Wednesday morning until Friday morning. Widespread rainfall totals of 2-4 inches are likely, with localized amounts of 7+ inches possible.
