Hazardous Weather

Hazardous Weather

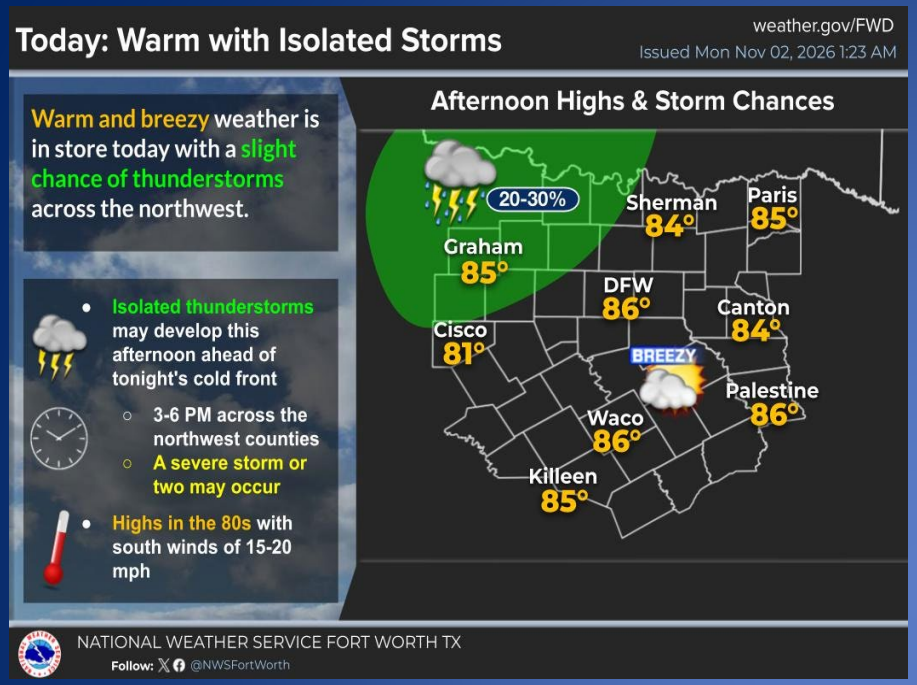

There is a low chance for strong to severe thunderstorms in the far eastern panhandles this afternoon. The main threat from these storms is damaging winds with a lesser chance for large hail. Even if these storms do form they will quickly depart eastward into Oklahoma proper.

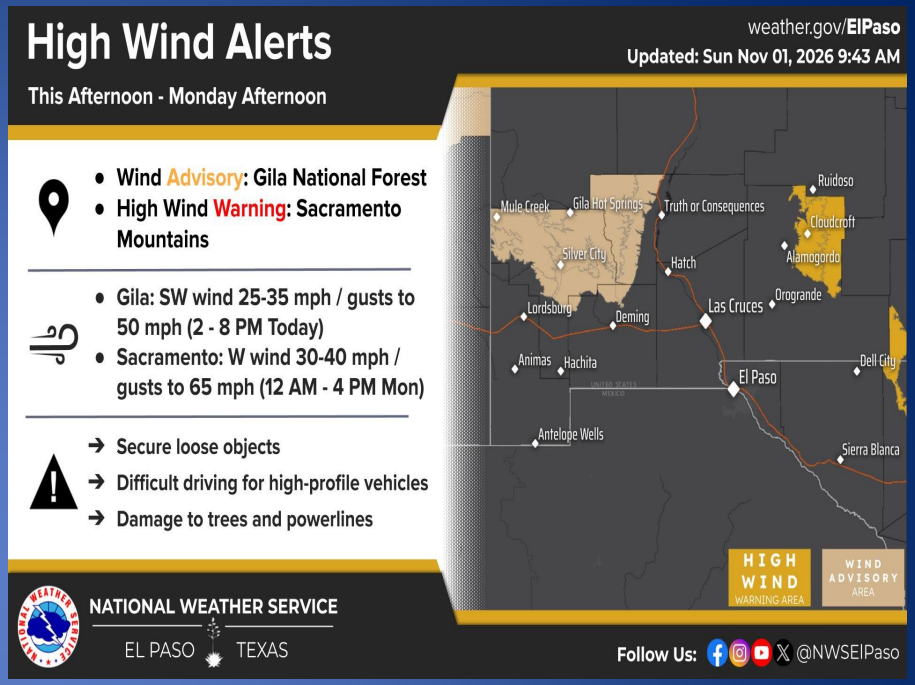

There is a level 2 of 5 risk of severe thunderstorms tonight over parts of the Edwards Plateau and Hill County. Damaging wind gusts and large hail are the most likely threats.

Hazardous Weather

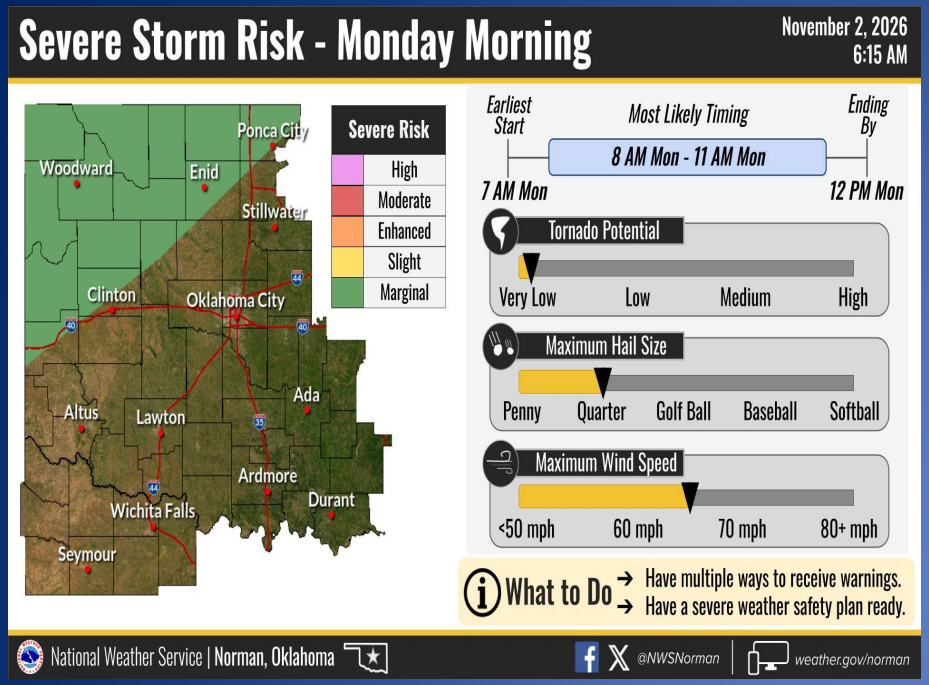

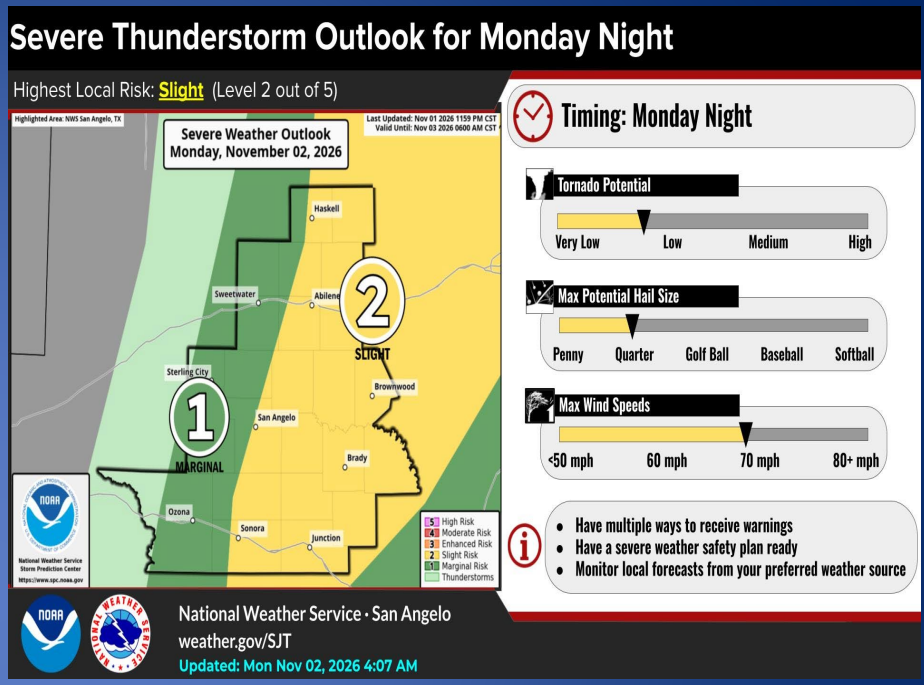

Isolated thunderstorms may develop across the northwest counties this afternoon ahead of tonight's cold front. Timing would be between 3 and 6 PM, and a severe storm or two is possible. Most locations, however, will remain warm, rain-free, and breezy, with highs in the 80s.

A Pacific cold front will move through the region this afternoon into the overnight hours resulting in windy conditions mainly over area mountains. A Wind Advisory is in effect for the Gila region from 2 PM through 8 PM today, while a High Wind Warning will be in effect for the Sacramento Mountains from midnight through 4 PM Monday. Wind gusts to 50-65 mph can be expected.

Hazardous Weather

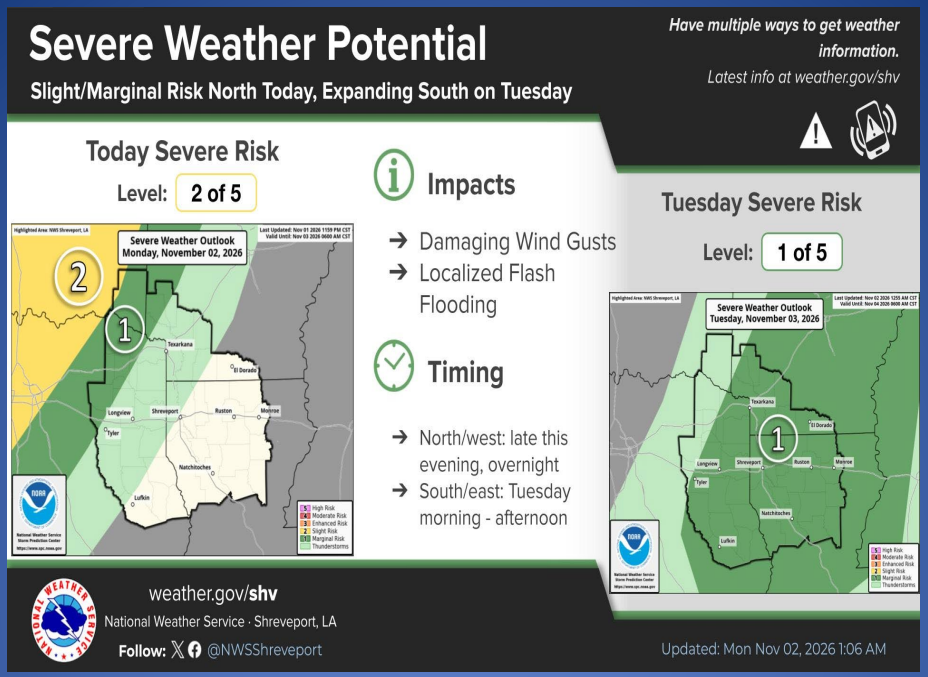

Ongoing thunderstorms in the eastern Texas Panhandle may gradually intensify and pose a risk for severe weather into portions of western and northern Oklahoma on Monday morning. Damaging wind gusts and large hail are the main concern, along with a very low risk of a tornado.

Scattered strong to potentially severe thunderstorms may develop late Monday afternoon and become a broken line by Monday evening, then continue southeastward overnight. The main hazard will be wind gusts over 60 MPH, and perhaps a few reports of large hail.

Hazardous Weather

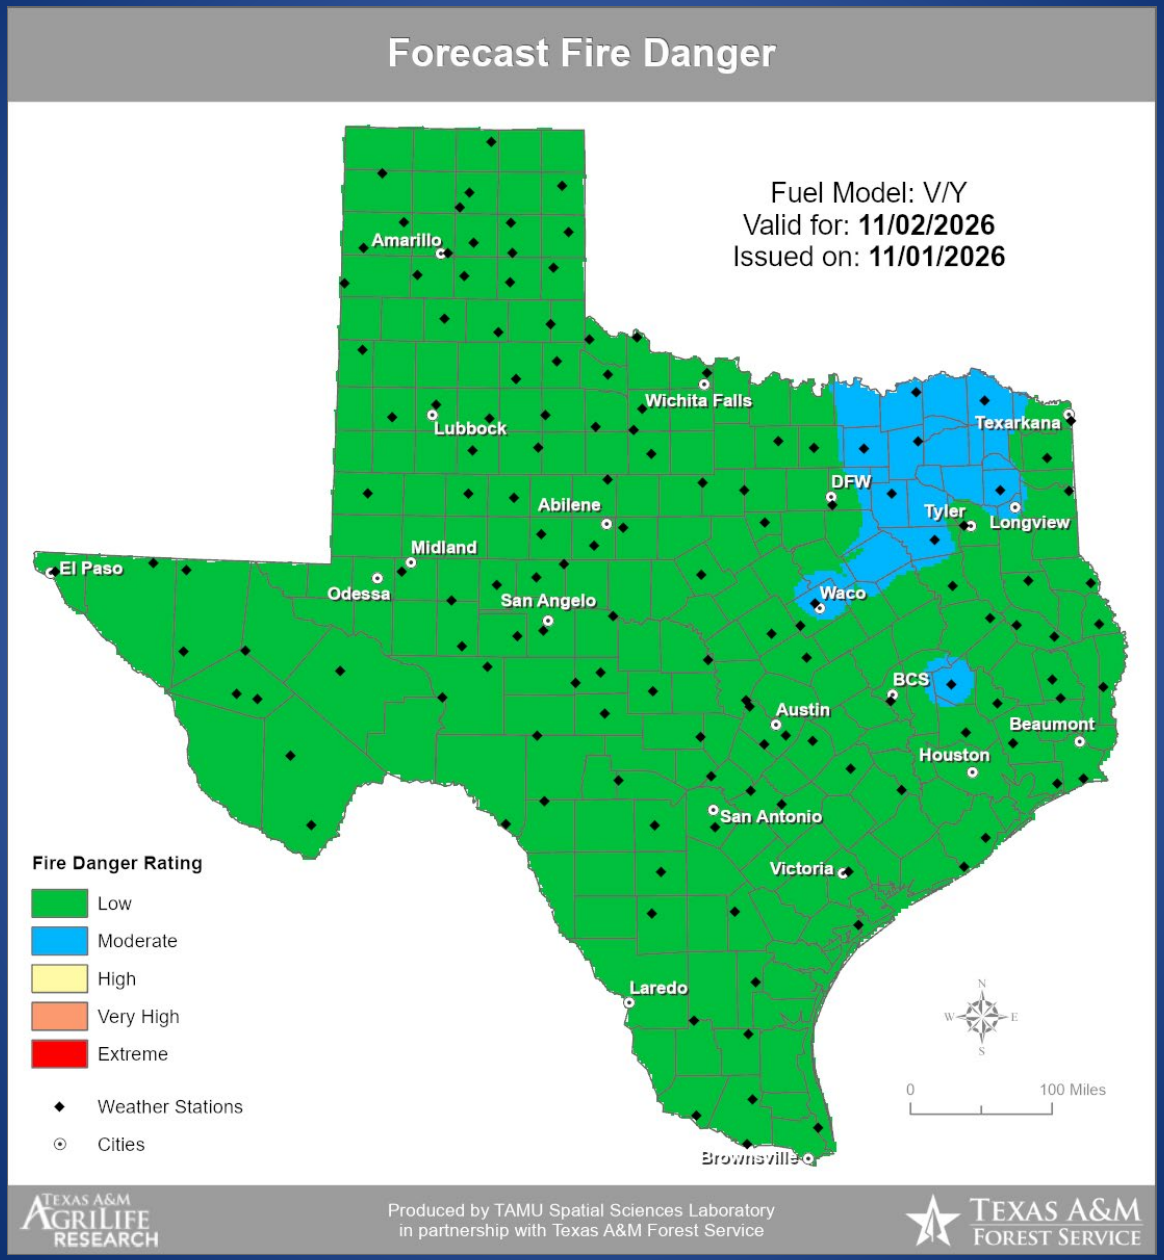

Scattered strong to potentially severe thunderstorms may develop late Monday afternoon and become a broken line by Monday evening, then continue southeastward overnight. The main hazard will be wind gusts over 60 MPH, and perhaps a few reports of large hail.
