Hazardous Weather

Hazardous Weather

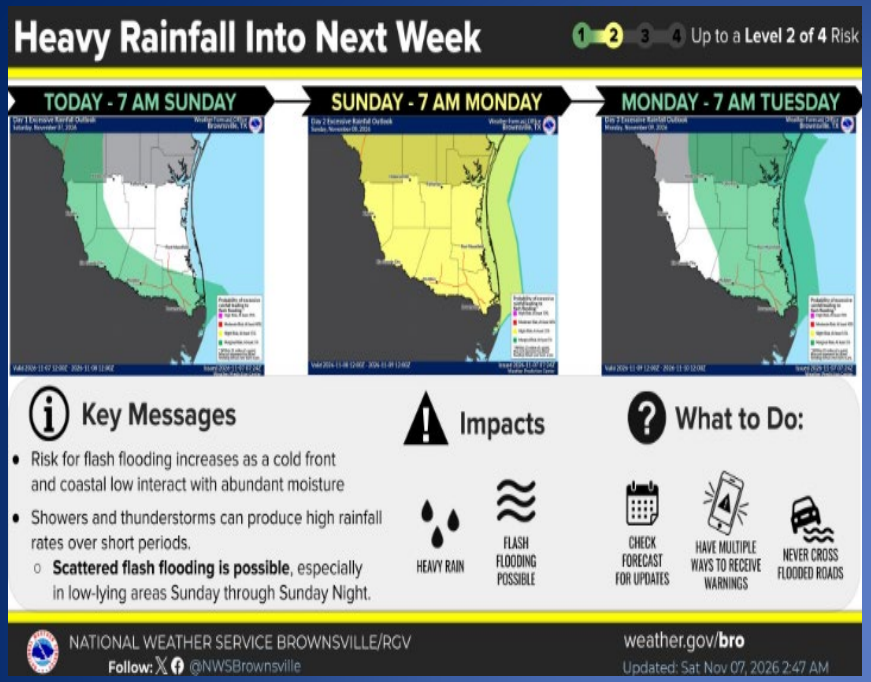

Periods of steady light to moderate rain are expected Saturday through Monday for much of South Central Texas. Rainfall totals are expected to be in the 1 to 3 inch range with pockets of higher amounts up to 5 inches. This is expected to be a long duration steady rain event. Therefore the threat for flooding across most areas remains low. The greatest potential for isolated flooding concerns is highlighted in and around the dashed area. However for most this will be a very welcome and beneficial rain.

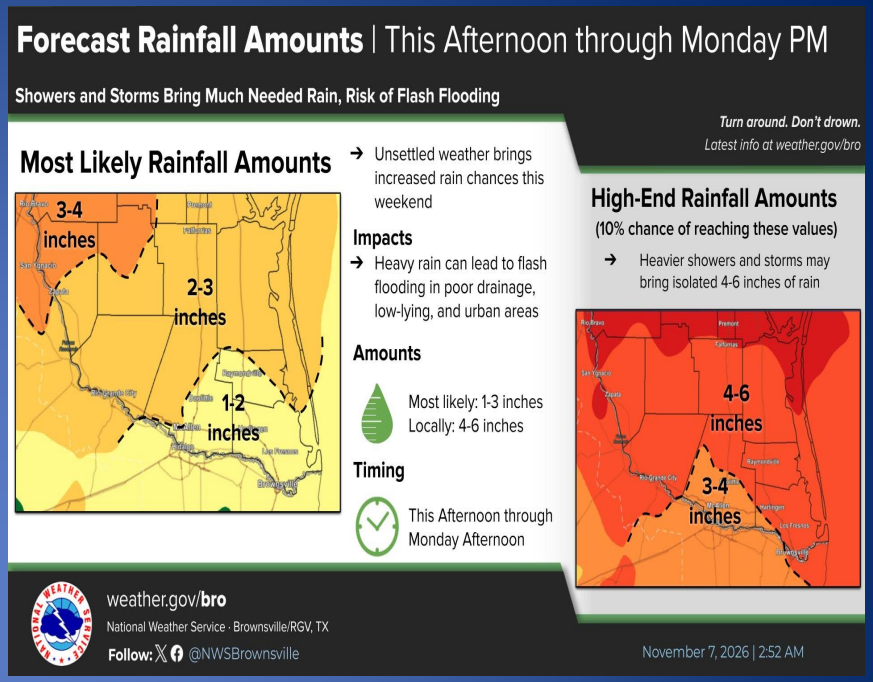

Periods of heavy rainfall is expected over the region this evening through Monday. Localized flooding will be possible as rainfall totals of 2-4 inches are expected with localized totals over 6 inches.

Hazardous Weather

There is a Marginal Risk (level 1 of 4) of excessive rainfall leading to flash flooding today and Monday, with a Slight (level 2 of 4) Risk on Sunday. Isolated to scattered flash flooding is possible under heavy or repeated storms. Stay weather aware this weekend and visit weather.gov/bro for the latest.

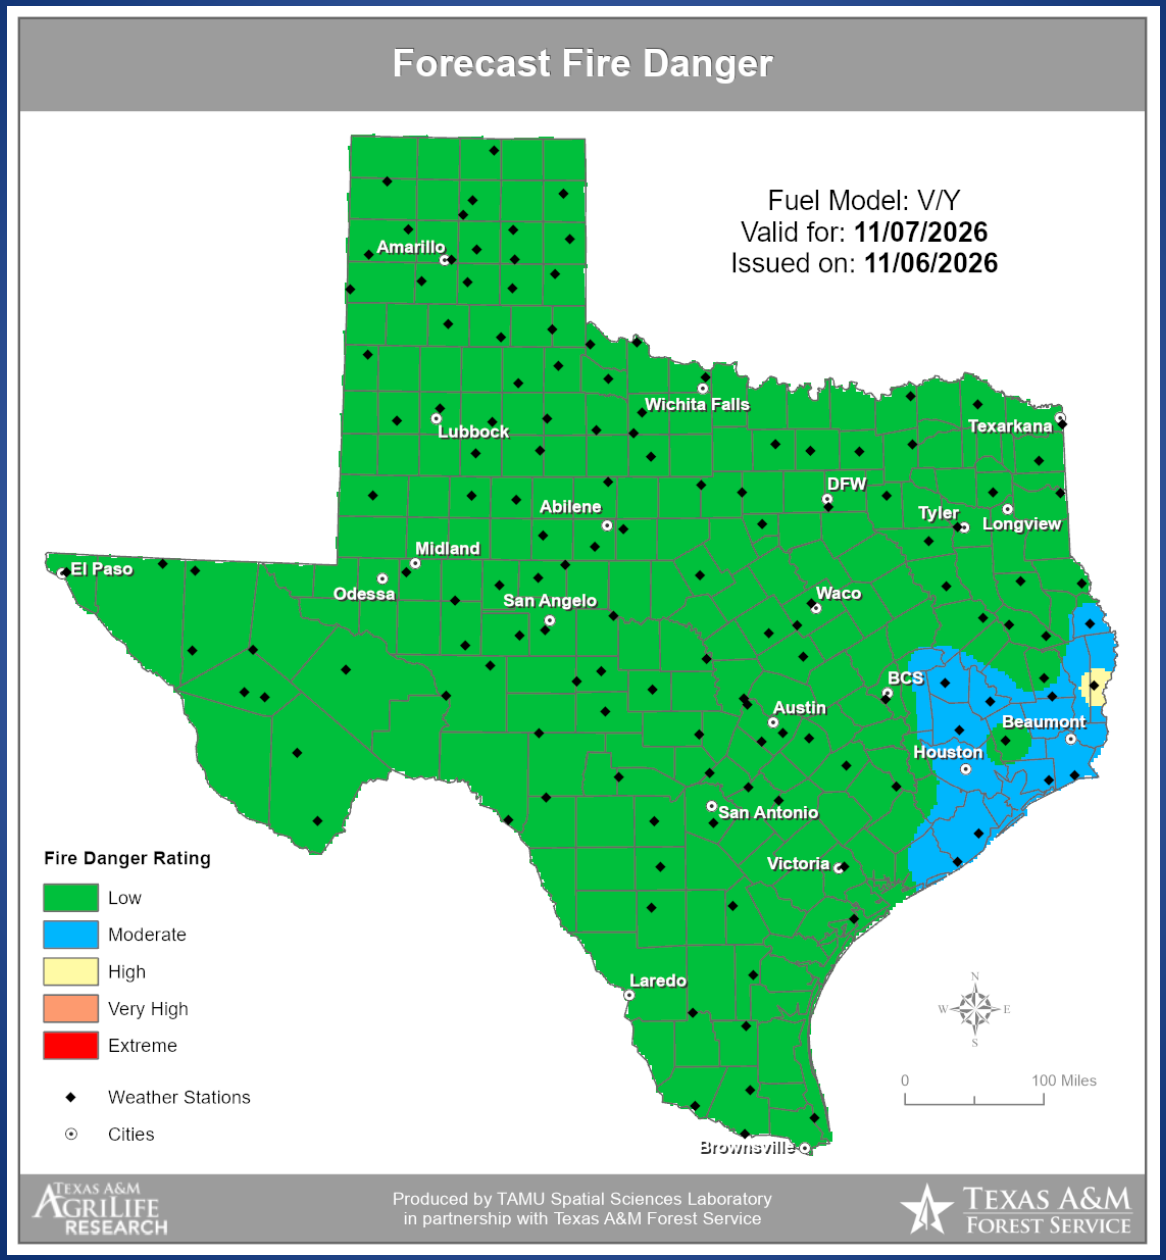

Here are the forecast rainfall amounts from this afternoon through Monday night. The most likely rainfall amounts will range from 1 to 2 inches across the Mid to Lower Valley and 2 to 3 inches across the Upper Valley into the Northern Ranchlands, and around 3 inches over the portions of the Rio Grande Plains. The high-end rainfall amounts of 3 to 6 inches will be possible across portions of the area.
