Hazardous Weather

Hazardous Weather

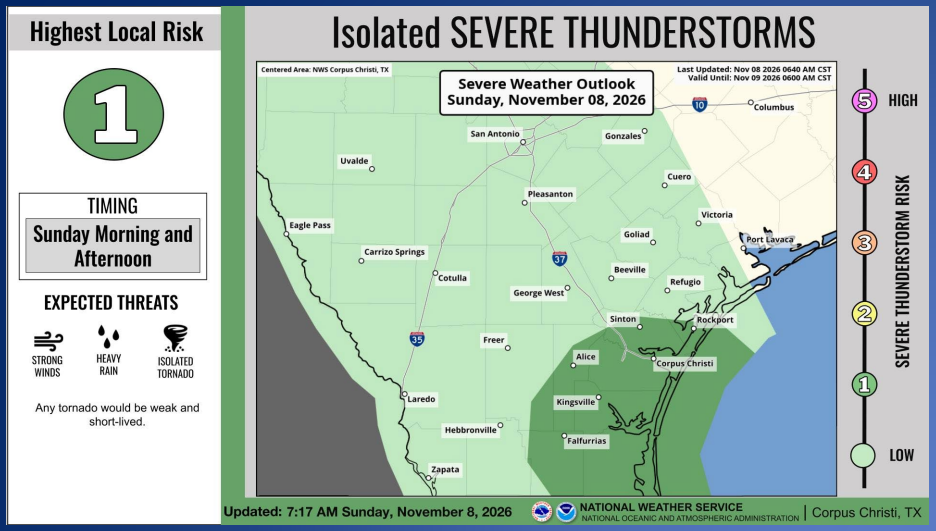

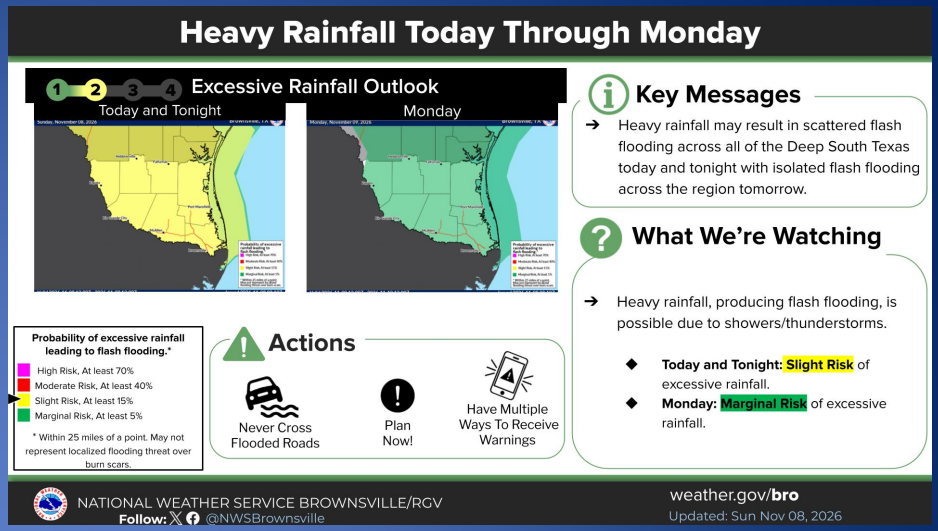

Periods of steady light to moderate rain are expected through early Tuesday for much of South Central Texas. Rainfall totals are expected to be in the 1 to 4 inch range with pockets of higher amounts up to 6 inches. This is expected to be a long duration steady rain event. Therefore, the threat for flooding across most areas remains low. There is a potential for flooding concerns mostly highlighted in and around the dashed area. However for most this will be a very welcome and beneficial rain.

Showers and Storms expected Sunday Locally Heavy Rainfall Possible Key Messages: An upper level disturbance is expected to bring scattered showers and thunderstorms today through Monday afternoon, mainly in areas west of I-45. The strongest of these storms could produce locally heavy rainfall. Marginal Risk (level 1 of 4) of Excessive Rainfall on Sunday for areas Southwest of Columbus/Freeport. Potential Impacts: Most rainfall will be beneficial given ongoing drought conditions. Locally heavy rainfall could lead to instances of minor flooding/street flooding. Actions: Remain weather-aware and stay tuned for forecast updates!

Hazardous Weather

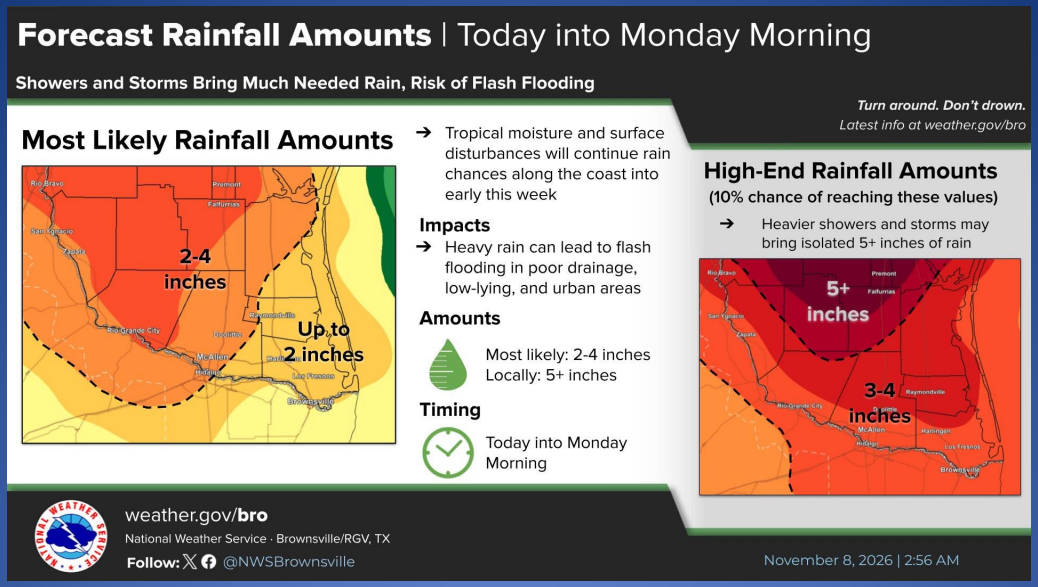

A marginal risk for severe storms exists today from near Corpus Christi south along the coast. Main hazards are strong winds and an isolated tornado in addition to the expected heavy rain. Any tornado would be weak and short-lived.

There is a Slight Risk (level 2 of 4) of excessive rainfall leading to flash flooding today and tonight, with a Marginal Risk (level 1 of 4) on Monday. Isolated to scattered flash flooding is possible under heavy or repeated storms. Stay weather aware this weekend and visit weather.gov/bro for the latest.

Hazardous Weather

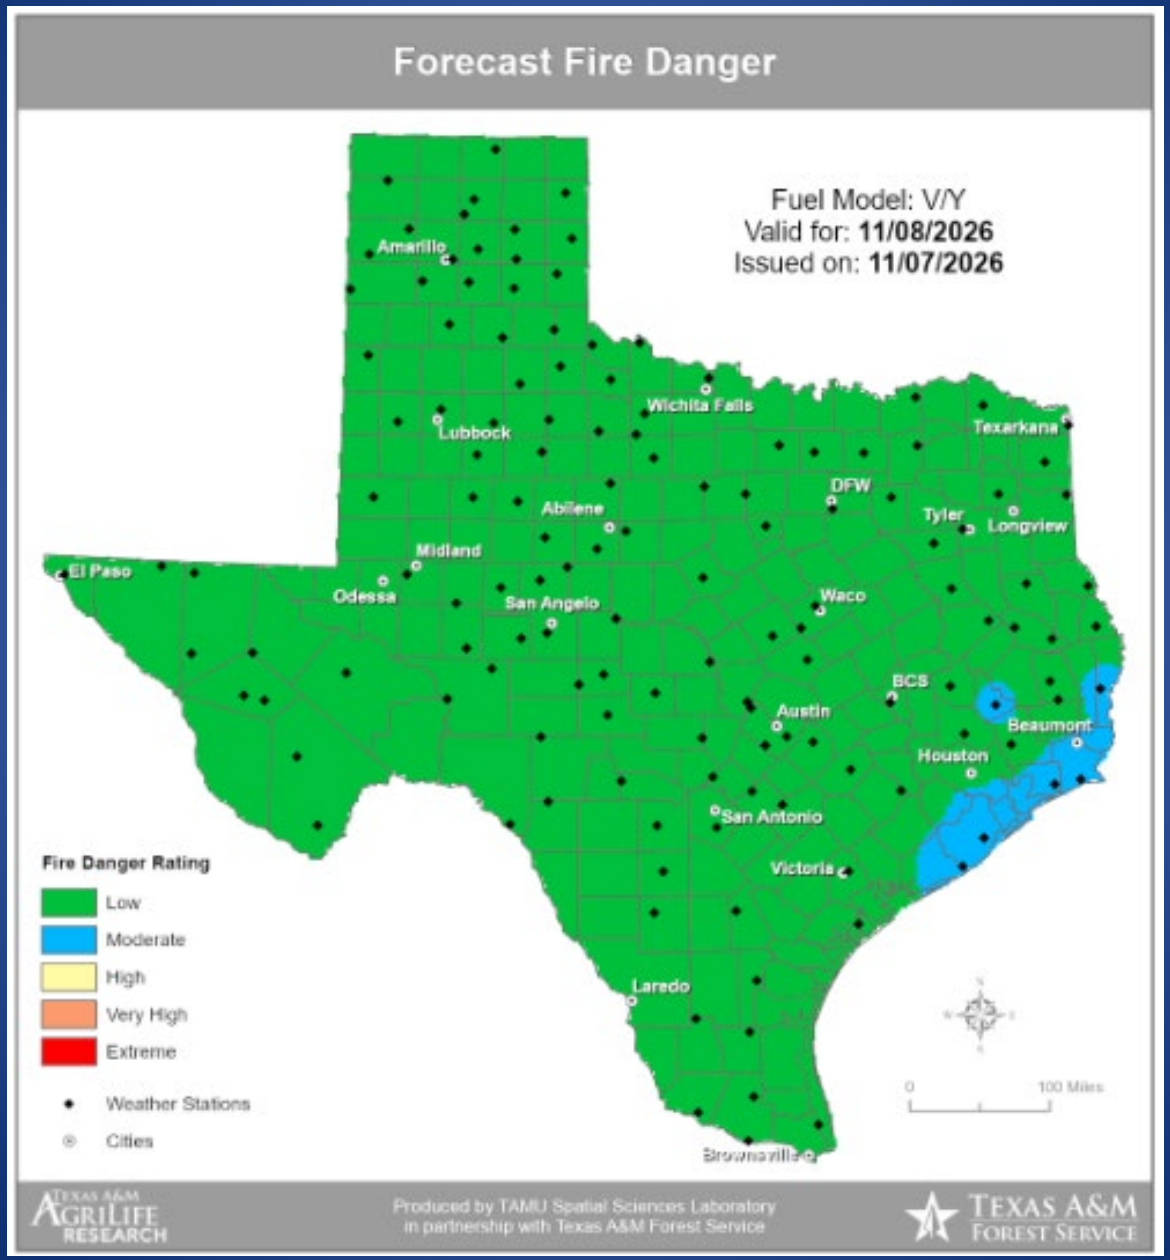

Here are the forecast rainfall amounts into Monday morning. The most likely rainfall amounts will range from up to 2 inches across Lower Valley and 2 to 4 inches across the Mid to Upper Valley into the Northern Ranchlands. The high-end rainfall amounts of 3 to 4 inches across the Rio Grande Valley to 5+ inches across portions of the Northern Ranchlands.
